“Thanks for the 60-minute Kamala Haris commercial.”

-webinar attendee, 10/2/2024

“Jeff may as well have been wearing a MAGA hat.”

-webinar attendee, 10/2/2024

“Why is this the only place I’m seeing this data?”

-webinar attendee, 10/2/2024

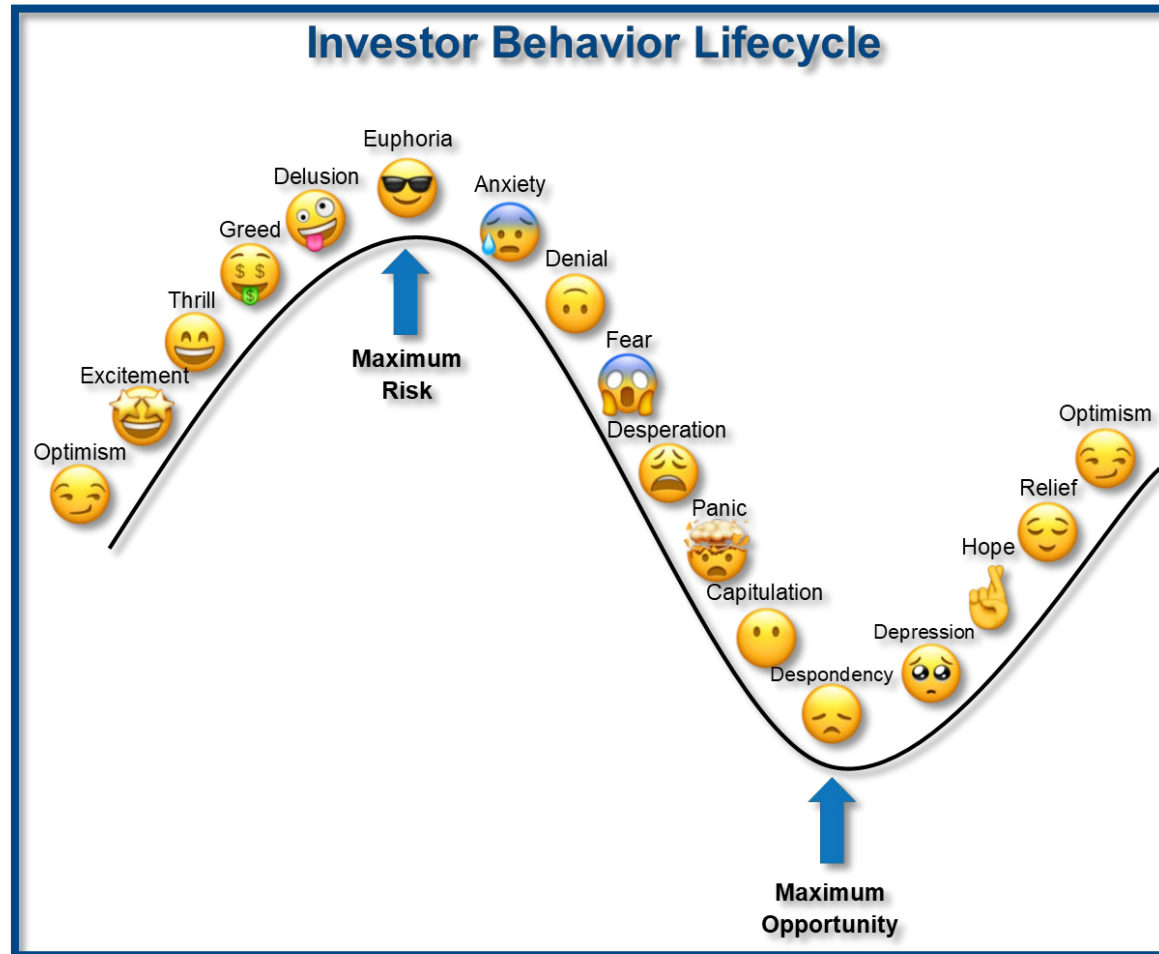

“This was the definition of fake news.”

-webinar attendee, 10/2/2024

“I couldn’t tell which candidate Jeff endorsed.”

-webinar attendee, 10/2/2024

Understanding Human Behavior

The stock market is a story of **cycles** & of the **human behavior** that is responsible for **overreactions** in both directions.

GDP Components

Understanding GDP Reports

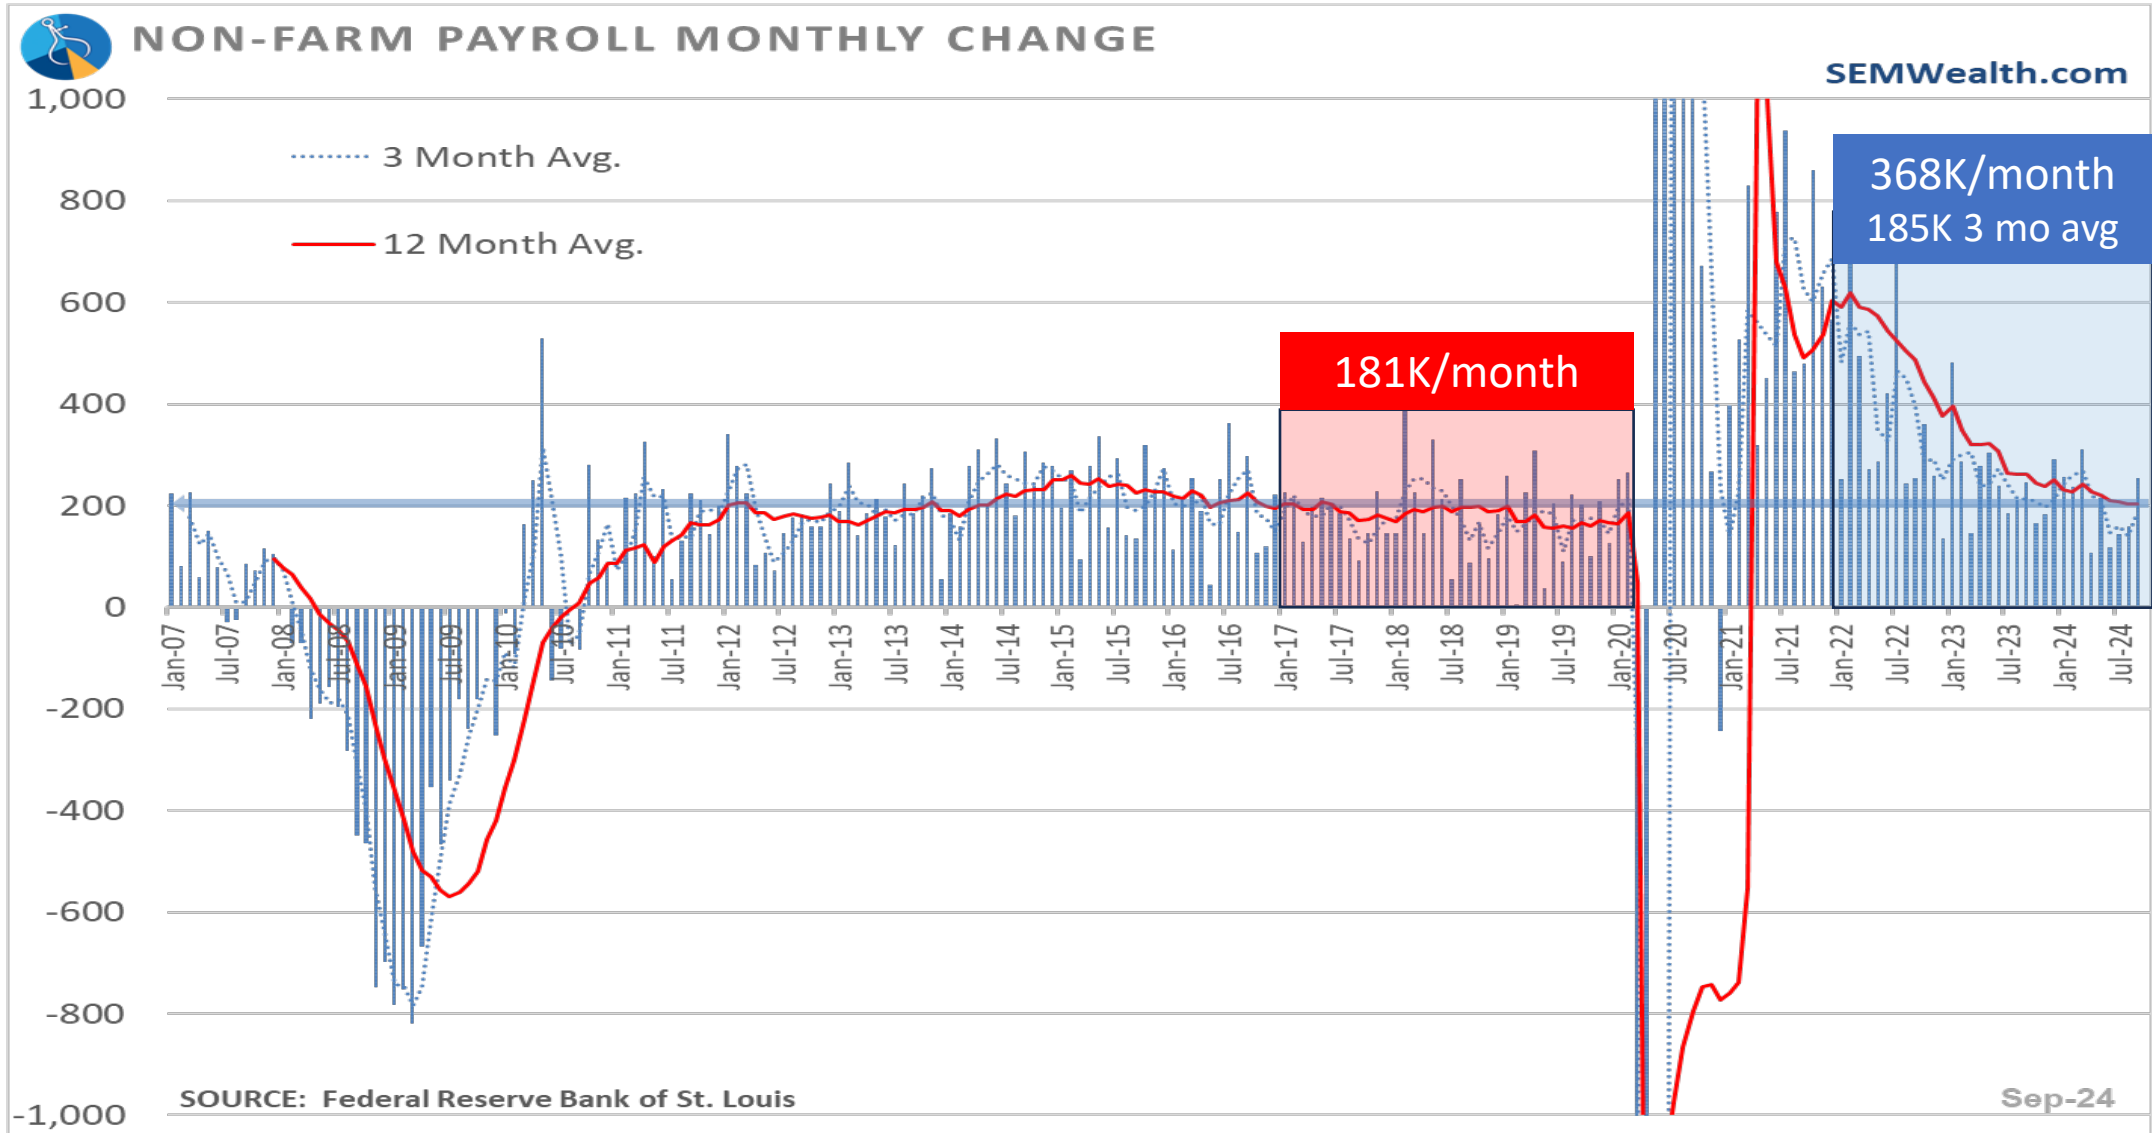

- Official GDP numbers can be misleading
- “Seasonally adjusted annual rate” causes large swings
- Focus should be on 1-year rates of change
- We have had few periods this century above the long-term average

Long-Term Outlook

Investors often look at the past bear markets and with hindsight believe they could have avoided it. This leads to overconfidence in their ability to recognize the next looming bear market. In addition, the longer the market moves higher the more likely conservative investors are going to abandon their lower risk investments and move into riskier assets.

Stocks are a “mean-reverting” asset, meaning after prolonged periods above the long-term average, they will go through a sharp correction.

Whoever wins, it will not be a 'mandate'

We must understand.....

- Major economic policies do not change on day 1 (only regulatory guidance as allowed.....after legal challenges)
- Campaign talking points do not always become priorities once the election is won
- It is difficult to pass economic polices which both sides do not agree with
- The stock market is a 'forward-looking mechanism', meaning it will anticipate changes BEFORE they happen
- We will have plenty of time to adjust to any major financial changes BEFORE they become law
- The stock market historically prefers a SPLIT in Washington

Trump's tax, spending twice as much debt as group says

By David Lawder

October 7, 2024 3:29 PM EDT · Updated 3 days ago

Summary

- Trump plans estimated to add \$7.5 trillion to de
- Harris plans would add \$3.5 trillion in new debt
- Deficit estimates draw criticism from both Trum

TOPLINE PRELIMINARY ESTIMATES

| 10-Year Revenue (Billions) | Long-run GDP | Long-Run Wages | Long-Run FTE Jobs |
|-------------------------------|--------------|----------------|-------------------|
| -\$1,325 | -0.2% | +0.6% | -387,000 |

Trumponomics: Rhetoric versus reality

- If implemented in full on day one, Donald Trump's trade, immigration and fiscal policies would together be **stagflationary**. We suspect that **he will be forced to water down his plans**, however, and it could take some time to implement them. The upshot is that the impacts on both inflation and GDP growth should be smaller than many anticipate.
- Given the potential for Kamala Harris to stage a Democratic comeback in the presidential race with three months still to go, we're still not ready to incorporate a Trump victory into our baseline forecasts yet. Nevertheless, **if Trump does win in November and enacts his trade, immigration and fiscal policies in full on day one, then we would expect to lower our GDP growth forecast for 2025 by up to 1.5% and raise our inflation forecast by 2.3%**.
- Under that scenario, which includes a 1.5% downward revision to our estimate of potential GDP growth in that year as well, **we would expect the Fed to set its policy rate more than 100bp higher**. We have used a simple Taylor Rule to determine the monetary policy response but, since the imposition of tariffs would represent a one-off increase in the price level rather than an ongoing inflationary threat, it's possible the Fed would not be that aggressive. We're also assuming that, even though there will likely be a new Chair in 2026, the Fed remains independent.
- Nevertheless, it is **highly unlikely that Trump would be able to push through his proposals in full** or in a timely manner. In reality, we suspect that if a 10% universal tariff is ever levied, then key trading partners will quickly secure opt outs in exchange for minor concessions. We would also expect energy imports to be exempted. It will also take time to ramp up Trump's planned curbs on unauthorised immigration. Finally, with the debt burden close to 100% of GDP, we think Trump is unlikely to push hard for another round of unfunded tax cuts. Our baseline forecasts already assumed that most of the original Trump tax cuts and extended beyond the current end-2025 sunset.
- Cutting through the rhetoric, **in the reality where it takes longer to enact even watered down trade and immigration policies, we suspect that real GDP would be 0.8% lower and the price level 1.2% higher**. The net impact of that is we would expect to raise our fed funds forecast by about 50bp.

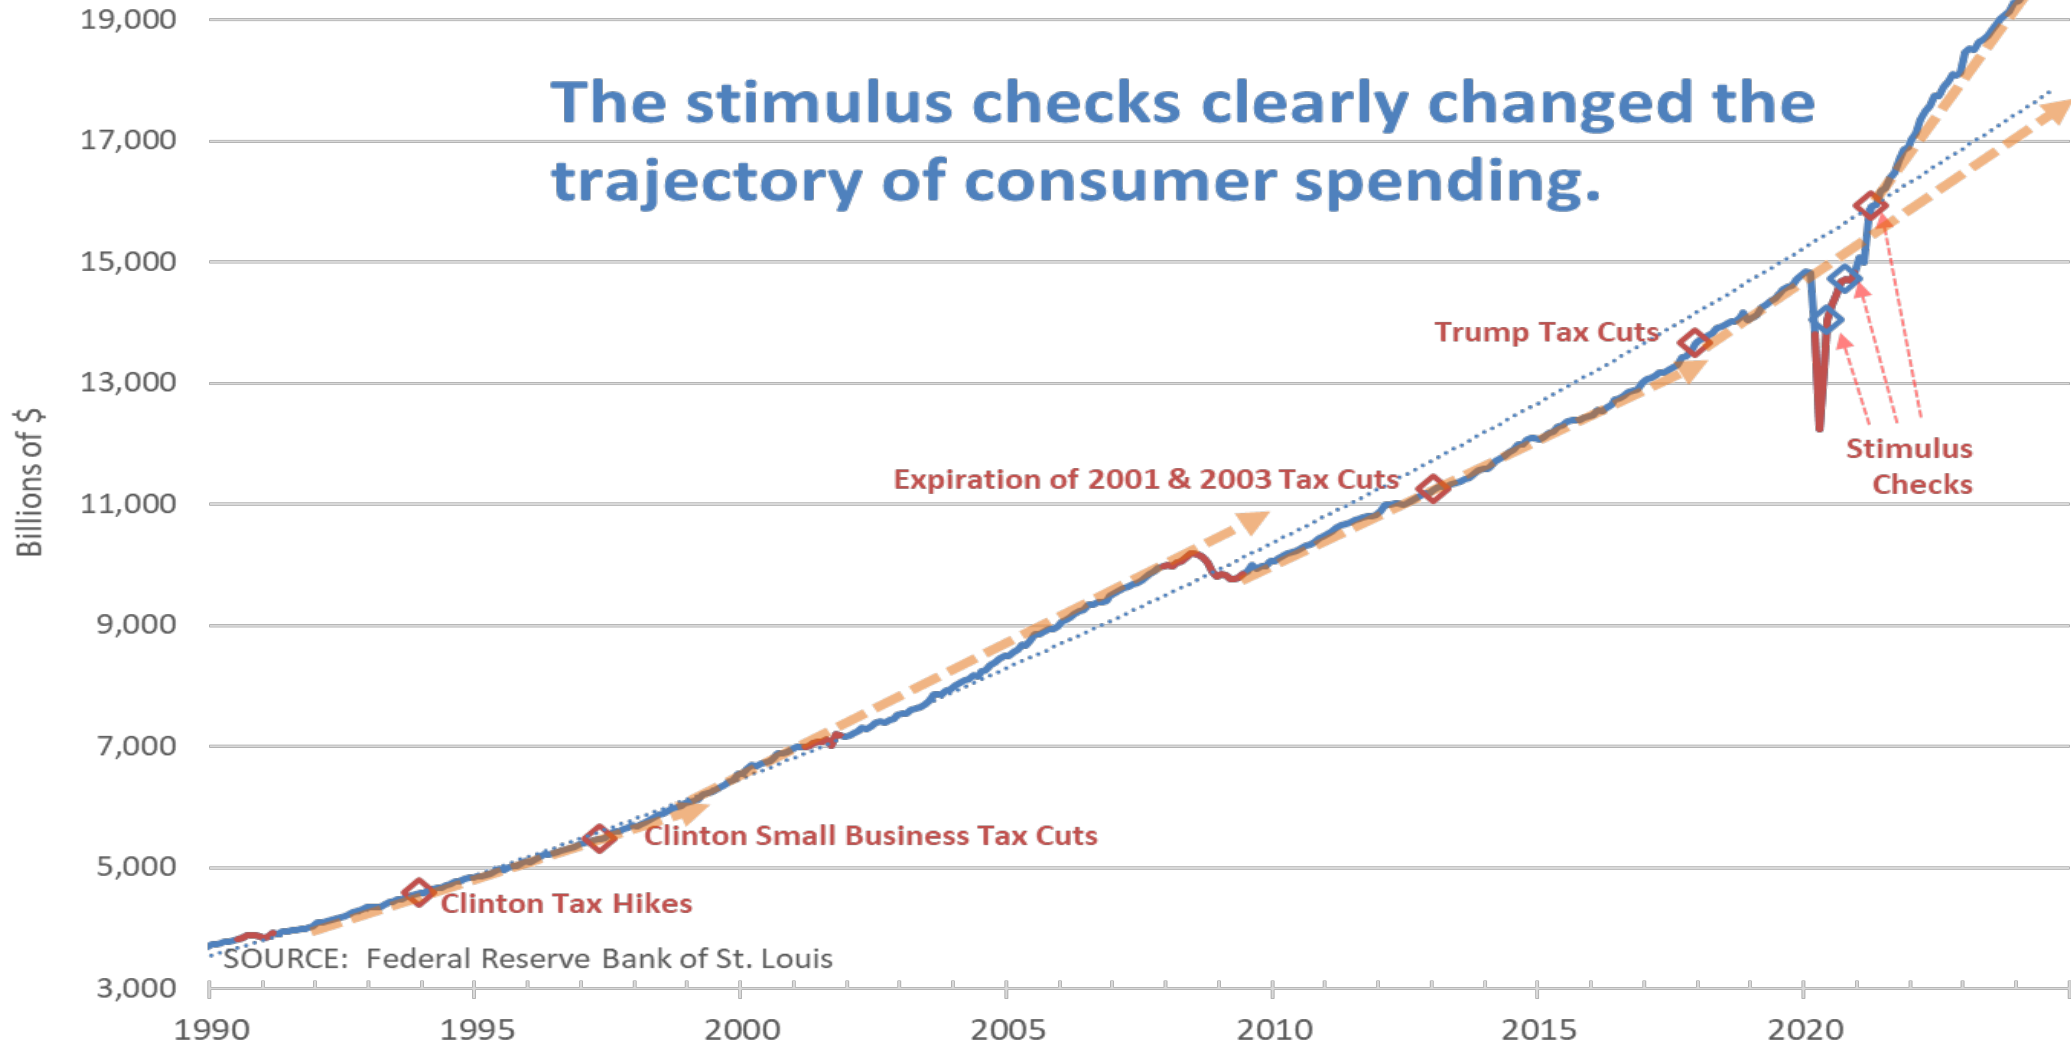

Taxes & Impact on Consumer Spending

Consumer Spending
