Jeffrey Hybiak, CFA (1998)

Investment Goal

SEM's Dynamic Aggressive Growth (DAG) seeks to actively manage exposure to the Morningstar Aggressive Allocation portfolio. The DAG program deploys dynamic portfolio management which increases or decreases allocations to specific assets based on economic growth expectations.

Investment Strategy

DAG utilizes an asset allocation model that seeks to adjust the asset allocation based on the current portion of the economic and business cycle. Half of the allocation signal is based on economic indicators, such as manufacturing activity, interest rate curves, monetary policy, labor market growth, and consumer spending. The other half of the signal is derived from market based variables including valuation measurements, relative strength, volatility, and the breadth of the current market.

Using the Morningstar Aggressive Allocation index as a benchmark, DAG will overweight small cap & emerging markets if the economic indicators are positive, or eliminate small cap & economic exposure if the indicators are negative.

What to Expect

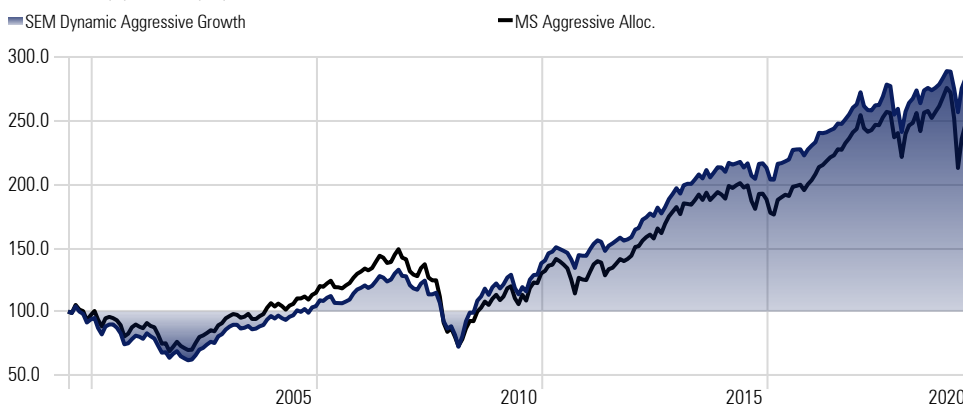

Over the long-term DAG is expected to provide exposure to a high percentage of the movements in the market, both up and down. Historically DAG has averaged nearly the same overall exposure to equities as the benchmark allocation. The advantage of the portfolio stems from the time spent in each asset class. The goal is to enhance returns by having additional exposure to higher risk assets at opportune times, while lowering market exposure when the economy is struggling. Typically DAG adjusts the allocation 4-6 times per year. With the goal of increased market exposure, risk is also high. During bear markets DAG will still experience large losses.

Overall DAG is suitable for long-term investments (10-15 year time horizon or longer) where investors are seeking higher returns and some active management of market exposure. Investors should also be comfortable with higher levels of risk.

DISCLAIMER

All results assume the maximum management fee was deducted in arrears and capital gains and dividends were reinvested. The default management fee for all accounts is 1.62% per year (1% for advisor, 0.50% for SEM, and 0.12% to E*Trade). Some advisors may choose to charge 1.12% per year for their portion of the fee, causing the maximum quarterly fee to increase to 1.74% per year. Results prior to April 30, 2016 are not actual, they are HYPOTHETICAL model performance. There are inherent limitations in HYPOTHETICAL results. One of the mutual funds used (Emerging Market Leveraged Index) was not available until 2005, making the HYPOTHETICAL results unattainable during that time. Actual mutual fund prices are utilized where available. HYPOTHETICAL results were obtained by using the actual mutual fund prices and/or estimated fund performance using their benchmark index. Where indices are used, mutual fund expenses are approximated using expense ratios of the funds. Results do not include the benefit of money market dividends used when the model allocations utilized money market funds. Real time results WILL deviate from the HYPOTHETICAL results due to several factors such as mutual fund expenses, differences between the time the trade was placed and the actual market closing price, tracking differences between the fund and the index, the fact that material economic and market factors might have an impact on the investment advisor's decision making process, and the fact that tested results occurred in an unusually strong market environment. Advisor reserves the right to add or replace trading systems during real time without restating model performance results if they believe the return/risk profile will not change substantially. All accounts within a program at a specific custodian are managed in a similar manner. Starting May 1, 2016 performance results are an asset weighted composite of all accounts in the program for the entire period. For more details on the composite construction, please contact Strategic Equity. Individual client results may vary from the performance of the composite. Some or all of the following may occur: There could be cash flows into or out of the account. The advisor could select a different fund in the same asset class for different client accounts. Different custodians could have different fund availability, annual costs, and fees. The advisor may use different trading systems or system allocations at different custodians. Clients in the same program can be charged different fees. Fee schedules are available in Strategic Equity Management's Firm Brochure or upon request.

Benchmark results were provided by Morningstar or the index provider and include dividends.

Past performance is no guarantee of future results. There is potential for loss as well as gain in security investments of any type, including those managed by Strategic Equity Management, Inc. The investments discussed in this presentation may not be suitable for all investors. Strategic Equity Management's Firm Brochure is available upon request.

Benchmark Descriptions and Comparison to SEM Programs

There are material differences between the programs Strategic Equity Management manages and the benchmarks selected that impact performance. The objective of the benchmark is to represent a passive investment in similar asset classes to this program. The objective of SEM's Dynamic Aggressive Growth Program is to provide benchmark type returns with lower volatility over a full market cycle. The returns should be expected to vary from the returns of the benchmark due to our active management style, which utilizes money market funds and inverse funds or sub-accounts with the goal of reducing volatility.

The following is a description of the benchmark used in the performance materials:

Morningstar Category Aggressive Allocation (85% + Equities): Aggressive-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. These portfolios tend to hold larger positions in stocks than moderate-allocation portfolios. These portfolios have over 85% of assets in equities and the remainder in fixed income and cash.

S&P 500 Index: The S&P 500 index is an unmanaged capitalization weighted group of 500 stocks as selected by Standard & Poor's. They are usually the 500 largest companies in terms of market capitalization and are chosen to represent the entire market's value. The S&P 500, while not a benchmark for any specific SEM program, is often used by institutional investors to compare performance of the overall "stock market". The index is not available for direct investment and therefore does not include any management fees, transaction costs, or other expenses.

There is no representation made as to the future results of SEM's programs or if they will be profitable.
