

# SEM Tax Advantaged Bond

Return Date: 6/30/2022

Benchmark: TAB Blended Benchmark

## Drawdown - SEM (shaded) vs. Benchmark & S&P

Time Period: 7/1/2007 to 6/30/2022

SEM Tax Advantaged Bond TAB Blended Benchmark S&P 500 TR USD

## Investment Goal

Tax Advantaged Bond is designed for taxable accounts. This program seeks to provide lower volatility with a rate of return equal to or better than a passive municipal bond fund allocation. Recommended for accounts with a two-year or greater time horizon. Funds can be added or removed at any time with no penalty.

## Investment Strategy

Tax Advantaged Bond combines active bond fund trading systems with a strong emphasis on High Yield Municipal Bond mutual funds to provide income tax advantages. Ideally each trading system moves assets into a "safe harbor" asset class (short-term government bond funds & other high quality bond funds) during market declines.

## What to Expect

Tax Advantaged Bond's strategies will not always sell at the highest point or buy at the lowest point. While the TAB program trading strategies seek to avoid large losses, rapid trend changes can create losses. Tax Advantaged Bond is designed to provide income and growth with the goal of avoiding major declines by diversifying assets between multiple trading strategies, all of which can allocate to municipal bond funds when they are selected by the individual strategy. Lower downside volatility is especially attractive for investors taking periodic distributions from their account.

While municipal bond investing may offer lower volatility than the stock market, history has shown there can be large losses in municipal bond investing; especially in the high yield municipal bond class where credit is a larger concern.

## Risk/Return Statistics

Time Period: 7/1/2007 to 6/30/2022

Calculation Benchmark: S&P 500 TR USD

	SEM Tax Advantaged Bond	TAB Blended Benchmark	S&P 500 TR USD

#### DISCLAIMER:

Unless otherwise stated, all performance numbers are net of all maximum fees which would have been incurred by investors including any fees incurred inside a manager's model portfolio. Actual advisory fees may vary among clients with the same investment strategy. SEM's fee schedules are available in Form ADV Part 2 or upon request. All dividends and capital gains were reinvested. Past performance is not indicative of future results. All investments involve risk including those managed by SEM or the underlying managers. Clients are encouraged to consider the investment objectives, risks, fees, and other factors prior to investing. Unless otherwise stated, data was supplied by Morningstar and was deemed to be reliable. SEM has not independently verified the data provided by Morningstar or the calculations.

Prior to July 1, 2014 results are hypothetical results of the quantitative investment systems being utilized in the investment model. These systems look at the overall trends in the market and the various asset classes using mathematical formulas. From there they allocate in the available asset classes using available mutual funds and ETFs. While the use of mechanical systems removes most subjectivity, it should not be assumed the past market environment will be repeated, which could cause the models to have significantly different performance in the future. The underlying models were assembled by retroactively applying the investment strategy against historic market data with the benefit of hindsight. The model or strategy could have been changed in an attempt to obtain the desired performance results. The results are for illustrative purposes only and are not indicative of the manager or financial advisor's ability to select winning strategies. There is no guarantee future performance will continue to exhibit good return to risk. While blending multiple trading systems into single portfolios should help reduce risk, not all risk can be eliminated. Hypothetical performance does not represent actual performance or the impact of market factors. Real time results WILL deviate from the hypothetical results due to several factors such as mutual fund expenses, differences between the time the trade was placed and the actual market closing price, tracking differences between the fund and the index, the fact that material economic and market factors might have an impact on the investment advisor's decision-making process, and the fact that tested results occurred in an unusually strong market environment. Advisor reserves the right to add or replace trading systems during real time without restating model performance results if they believe the return/risk profile will not change substantially. Material changes in market and economic conditions from the past could result in higher risks and lower returns. Clients should expect future volatility and losses to exceed the hypothetical results. The use of a particular investment is not an endorsement by SEM of that investment or a recommendation for investments with that fund/ETF outside of the model.

Beginning on July 1, 2014 results are an asset weighted composite of all accounts in the program for the entire period. For more details on the composite construction, please contact SEM. Individual client results may vary from the performance of the composite. Some or all of the following may occur: There could be cash flows into or out of the account. The advisor could select a different fund in the same asset class for different client accounts. Different custodians could have different fund availability, annual costs, and fees. The advisor may use different trading systems or system allocations at different custodians. Clients in the same program can be charged different fees. Fee schedules are available in SEM's Firm Brochure, which is available at SEMWealth.com or upon request. Benchmark results were provided by Morningstar or the index provider and include dividends unless otherwise indicated. Past performance is no guarantee of future results. There is potential for loss as well as gain in security investments of any type, including those managed by SEM. The investments discussed in this presentation may not be suitable for all investors.

#### Benchmark Descriptions and Comparison to SEM Programs

There are material differences between the programs Strategic Equity Management manages and the benchmarks selected that impact performance. The objective of the benchmark is to represent a passive investment in similar asset classes to this program, in this case, 50% each High Yield Muni & Muni National Short Morningstar categories. The objective of SEM Tax Advantaged Bond Program is to provide benchmark type returns with lower volatility over a full market cycle. The returns should be expected to vary from the returns of the benchmark due to our active management style, which utilizes a money market fund and inverse funds or sub-accounts with the goal of reducing volatility. The following is a description of the benchmarks used in the performance materials:

50% Morningstar Category High Yield Muni: High-Yield Muni portfolios typically invest a substantial portion of assets in high-income municipal securities that are not rated or that are rated at the level of or below BBB (considered high-yield within the municipal-bond industry) by a major ratings agency such as Standard & Poor's or Moody's.

50% Morningstar Category Muni National Short: Muni national short portfolios invest in bonds issued by various state and local governments to fund public projects. The income from these bonds is generally free from federal taxes. To lower risk, these portfolios spread their assets across many states and sectors. These portfolios have durations of less than 4.5 years (or, if duration is unavailable, average maturities of less than five years).

S&P 500 Index: The S&P 500 index is an unmanaged capitalization weighted group of 500 stocks as selected by Standard & Poor's. They are usually the 500 largest companies in terms of market capitalization and are chosen to represent the entire market's value. The S&P 500, while not a benchmark for any specific SEM program, is often used by institutional investors to compare performance of the overall "stock market". The index is not available for direct investment and therefore does not include any management fees, transaction costs, or other expenses.

There is no representation made as to the future results of SEM's programs or if they will be profitable.
